

LF-07

Low Maintenance cost

- LF-07's heater produces hot air which is circulated within the system. And this enables LF-07 to maximize thermal efficiency. It works fast with low electricity consumption.
- You need to inspect the deodorizing system regularly in order to get excellent performance.

It treats all kinds of food.

- Korean, Chinese, Japanese, Western food all are treatable. Instead of using grinding method, LF-07 uses air circulating system which doesn't trouble you to separate waste into treatable and non treatable (shell, bones, and etc).
- You don't have to touch smelly food waste again so it's very simple and hygienic.

Improved drying ability

- Placing a plate with porosities on the bottom of the basket upgraded drying performance and it became easier to clean the basket.
- This environmental products makes hygienic kitchen and comfortable environment.

List of LOOFEN's unique and specialized technologies.

- It's modern design fits any places and enlightens its surroundings. It will make a harmony with any place from kitchen to terrace.
- For stand-alone products, state of art deodorizing catalyst eliminates germs, putrefactive bacteria germs. This promotes sanitary process and comfortable living environment
- LF-07's heater produces hot air which is circulated within the system and this enables LF-07 to maximize thermal efficiency. It works fast with low electricity consumption.
- Placing a plate with porosities on bottom of the basket upgraded drying performance and it became easier to clean the basket.
